EXPERIMENT 12
INSTALL TYPE-2 HYPERVISOR AND CONFIGURE A VIRTUAL MACHINE

Aim

To install and launch a Type-2 hypervisor on a host computer and configure a virtual machine using VMware Workstation Pro.

Software Requirements

1. Windows host computer
2. VMware Workstation Pro 26H1
3. Ubuntu 64-bit virtual machine
4. Sufficient host memory and disk space

Procedure

1. Start the Windows host computer and launch VMware Workstation Pro.
2. Verify that the VMware Workstation Pro home screen opens successfully.
3. Select an existing virtual machine from the Library panel.
4. Open the virtual machine details and review its allocated hardware resources.
5. Check the memory, processor, virtual disk, network adapter, and other device settings.
6. Confirm that the virtual machine is listed in VMware Workstation and is available for use.

Output

Figure 1 shows the VMware Workstation Pro 26H1 home screen. The Library panel displays the available virtual machines, including Kali Linux and Ubuntu. The home screen provides options to create a new virtual machine, open an existing virtual machine, and connect to a remote server. This confirms that VMware Workstation Pro is installed and launched on the host computer.

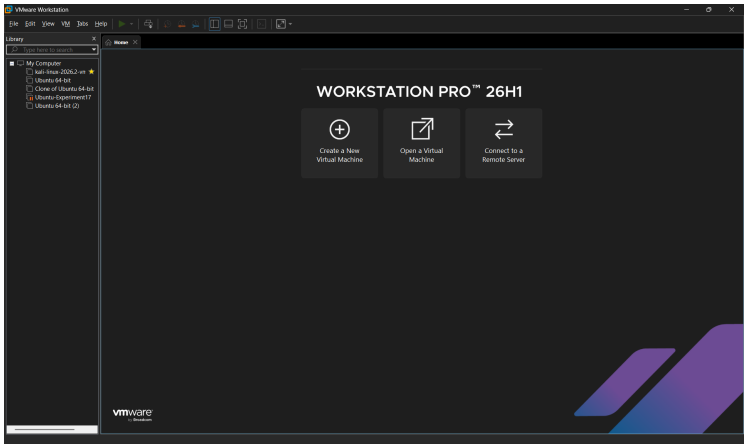

Figure 1: VMware Workstation Pro home screen showing the virtual machine library.

Figure 2 shows the configuration details of the selected Ubuntu 64-bit virtual machine. The VM is allocated 4 GB of memory and 4 processors. It has two virtual disks of 15 GB and 5 GB, and its network adapter is configured in NAT mode. The displayed state is Powered off, indicating that the VM is configured but not running at the time of capture.

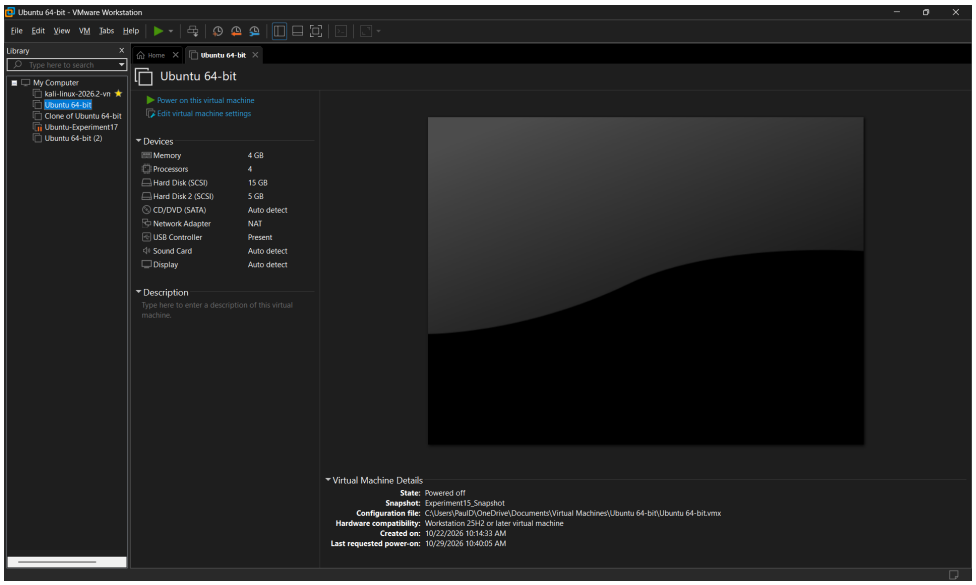

Figure 2: Ubuntu 64-bit virtual machine hardware configuration in VMware Workstation.

Result

VMware Workstation Pro 26H1 was successfully launched, and the configured Ubuntu 64-bit virtual machine was identified in the Library. Its allocated memory, processor count, virtual disks, and NAT network setting were verified. Thus, the Type-2 hypervisor was installed and used to view the configuration of a virtual machine.
