EXPERIMENT 2 – PROPERTY BUYING AND RENTAL SYSTEM

Aim

To develop a simple cloud-based Property Buying and Rental System using Zoho Creator and demonstrate the Software as a Service (SaaS) model.

Requirements

• Zoho Creator

• Web browser

• Internet connection

Procedure

1. Launch Zoho Creator and create a new application for handling property buying and rental information.

2. Create a form named Property Details from scratch to collect the required property details.

3. Add the necessary fields: Property ID, Process, Property Type, Area, Place, Range, Property Value and Rental Agreement.

4. Configure the Process field with Buy and Rent as the available choices.

5. Set the Property Type field to provide Residential and Commercial selections.

6. Add the Area, Place, Range and Property Value fields to record property information.

7. Configure the Rental Agreement field with Required and Not Required options.

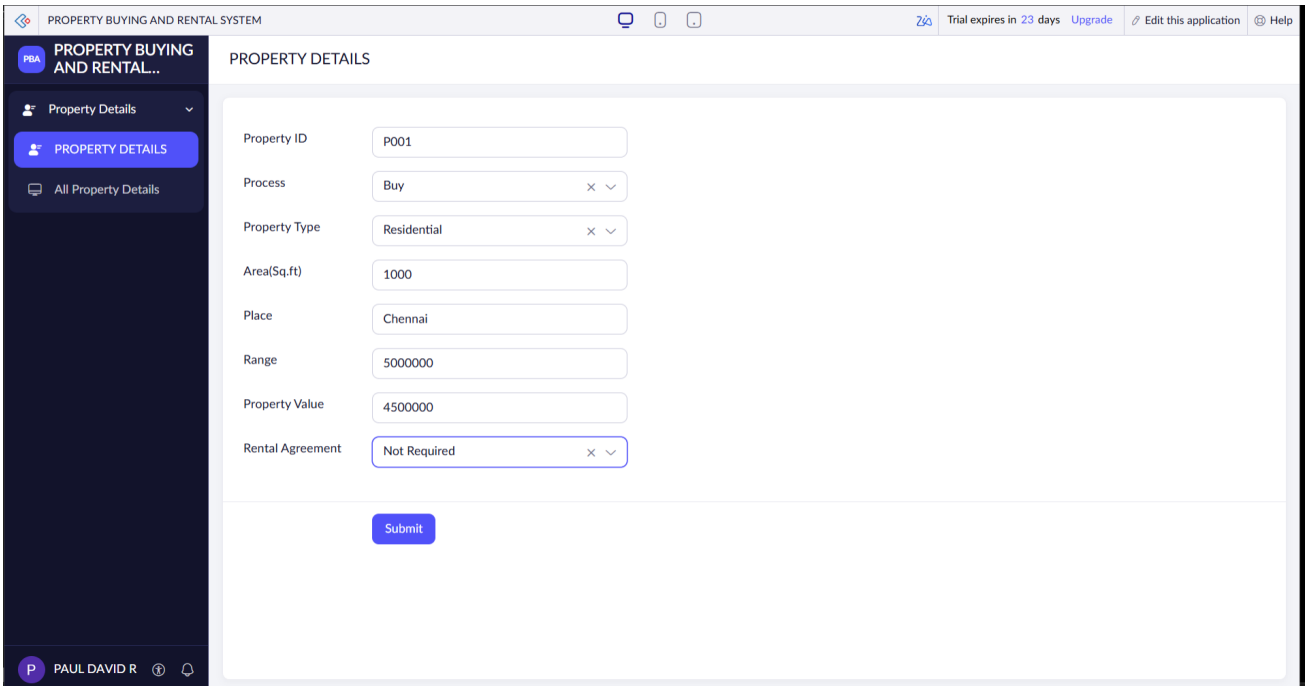

8. Save the completed form and access the application through its live view.

9. Enter sample property information and submit the completed form.

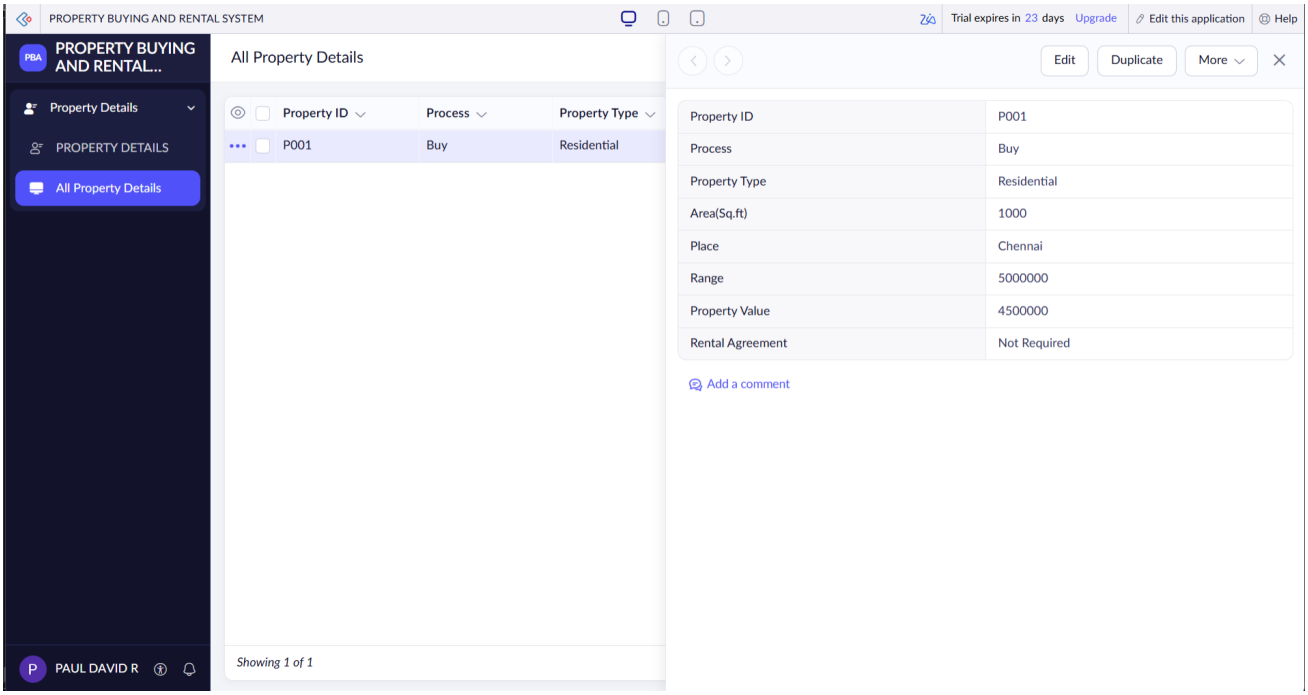

10. Open the submitted records and verify that the property information is displayed correctly.

Implementation

Input:

Output:

Result

Thus, the cloud-based Property Buying and Rental System was successfully created using Zoho Creator. The application was tested by entering sample property information, and the submitted property record was successfully displayed in the All Property Details report.
