EXPERIMENT 4 - LIBRARY BOOK RESERVATION SYSTEM

Aim

To develop a simple cloud-based Library Book Reservation System using Zoho Creator and demonstrate the application through a Software as a Service (SaaS) model.

Requirements

• Zoho Creator

• Web browser

• Internet connection

Procedure

1. Launch Zoho Creator and create a new application for managing library book reservation information.

2. Create a form named Library Book Reservation System to collect the required details of each book.

3. Add the required fields: Book Title, Author, Publication, Year, Edition, No. of Copies, Rack No. and Status.

4. Configure the Book Title, Author and Publication fields as single-line fields for entering book information.

5. Set the Year and No. of Copies fields as number fields to store numerical values.

6. Add the Edition and Rack No. fields to record publication and storage information.

7. Configure the Status field with Taken and Returned as the available choices.

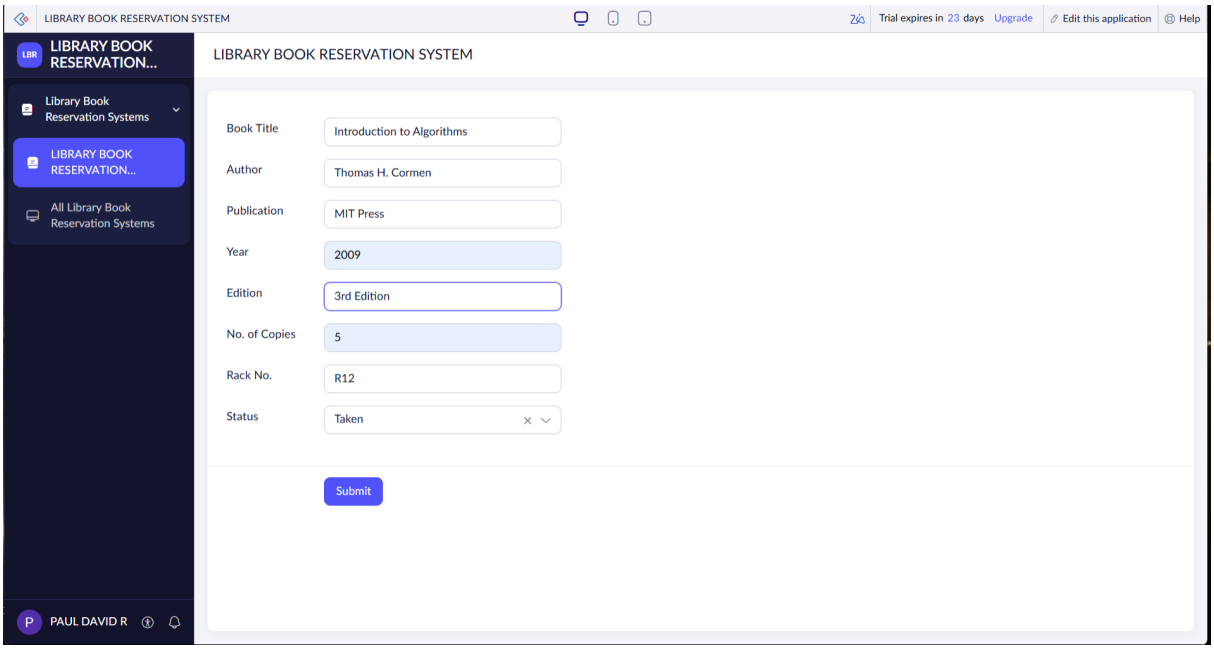

8. Save the completed form and open the live application to confirm that all fields are available.

9. Enter sample book information and submit the completed form.

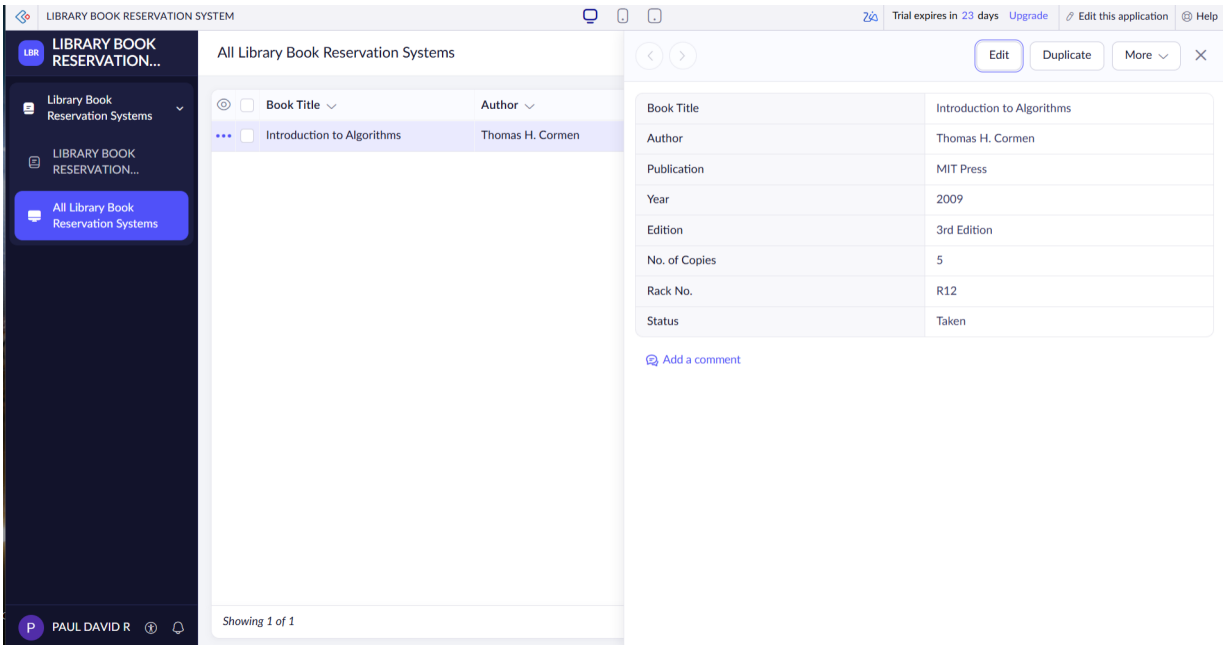

10. Open the submitted records and verify that the entered book details are displayed correctly in the report.

Implementation

Input:

Output:

Result

Thus, the cloud-based Library Book Reservation System was successfully implemented using Zoho Creator. The sample book details were entered and submitted successfully, and the stored record was verified in the All Library Book Reservation Systems report.
