EXPERIMENT 17

CHANGE VIRTUAL MACHINE HARDWARE COMPATIBILITY AND EXECUTE UNIX COMMANDS

Aim

To change the hardware compatibility of a virtual machine using VMware Workstation and verify that the resulting Ubuntu virtual machine can execute basic Unix commands.

Software Requirements

1. Windows host computer
2. VMware Workstation Pro
3. Ubuntu 18.04.3 LTS virtual machine
4. Sufficient disk space to create a separate clone

Procedure

1. Open VMware Workstation and select the Ubuntu 64-bit virtual machine.
2. Open the Change Hardware Compatibility Wizard from the virtual machine management options.
3. Select the target compatibility format, Workstation 17.5–17.6.x.
4. Choose to create a new clone so that the original virtual machine remains unchanged.
5. Name the clone Ubuntu-Experiment17 and review the conversion settings.
6. Click Finish and wait for VMware to clone the virtual machine, reconfigure its virtual hardware, and consolidate its disks.
7. Select Ubuntu-Experiment17 and power it on.
8. Log in to Ubuntu and execute the commands uname -a, ls, and pwd.
9. Inspect the command output and confirm that the cloned virtual machine operates successfully.

Output Explanation

The screenshots below show the converted virtual machine and the successful execution of basic Unix commands.

Implementation Screenshots

Figure 1. Converted virtual machine and compatibility details

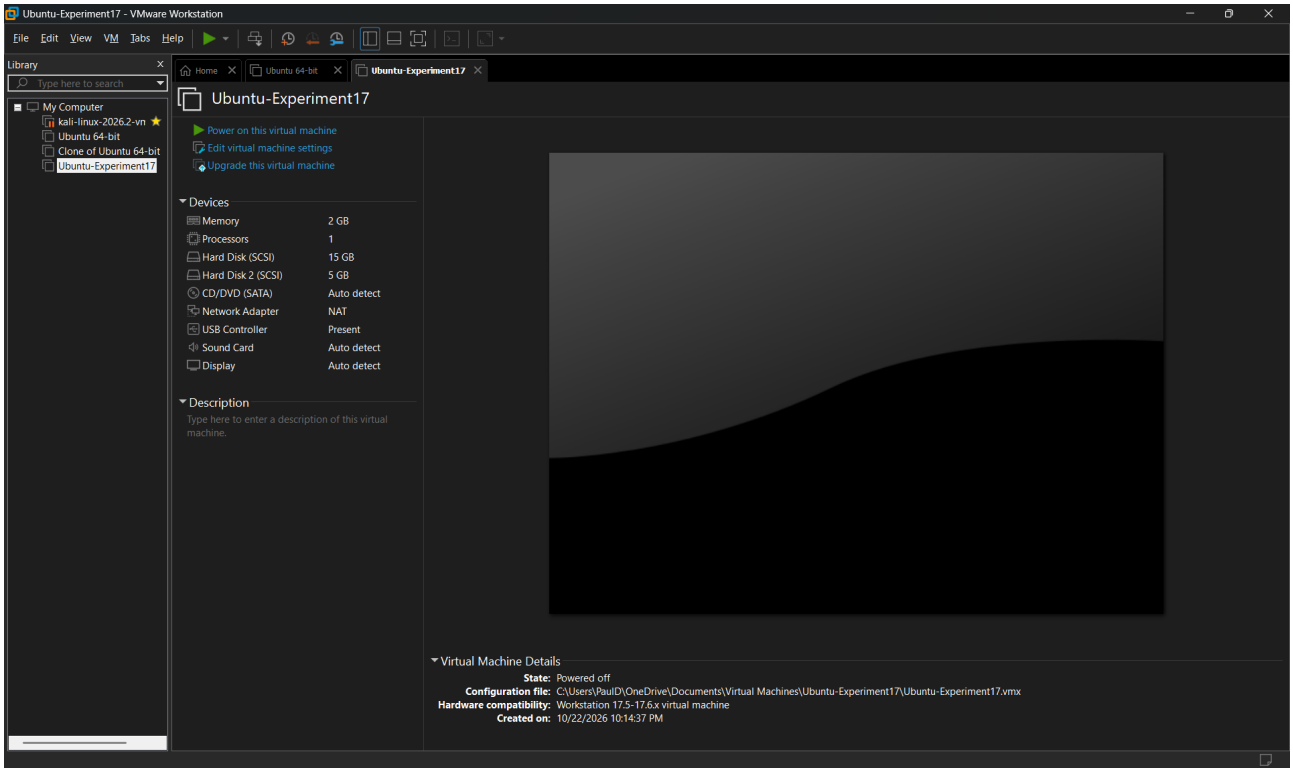

Figure 1 Output: The VMware library shows Ubuntu-Experiment17, and the details panel confirms Workstation 17.5–17.6.x hardware compatibility. The virtual machine is powered off after conversion.

Figure 2. Unix command execution in Ubuntu-Experiment17

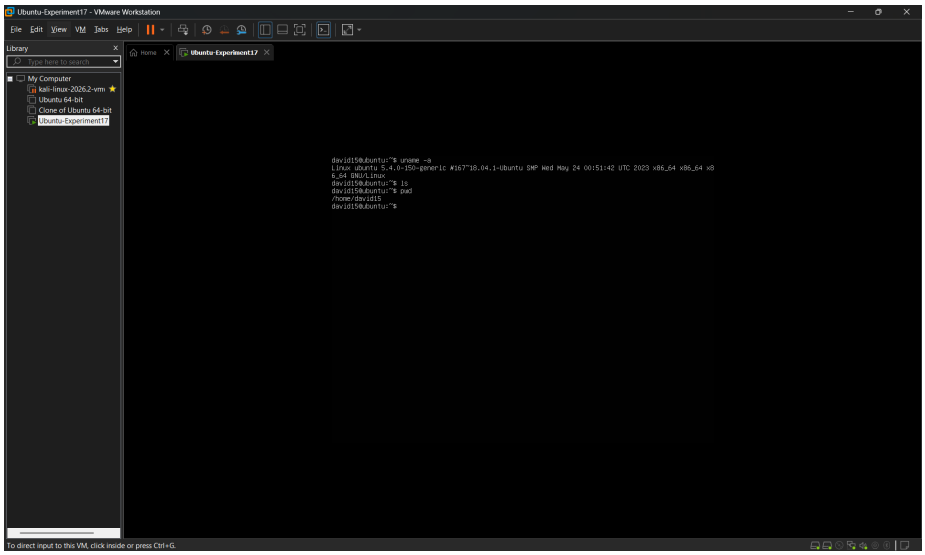

Figure 2 Output: The uname -a command displays Linux kernel and system architecture information, ls executes successfully, and pwd displays /home/david15 as the current working directory.

Result

Thus, the virtual machine hardware compatibility was changed successfully by creating a separate clone in VMware Workstation. The cloned Ubuntu system was started and the Unix commands uname -a, ls, and pwd were executed successfully.
